Art Unit: 3753

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 13-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over EP '150, of record, in view of DE '855, of record.

EP '150 shows a pivoted valve with two valved ports 40a, 40c and a common port 40b but it is not clear which are inlets. DE '855 shows a similar valve where the valved ports are inlets and the common port is an outlet. It would have been obvious at the time the invention was made to have used the EP '150 valve to switch two inlets as shown by DE '855. As to claim 17, each valve is an integrated pneumatic or hydraulic control device. As to claim 18, the recitation "especially in a valve gate housing of an automatic transmission" merely relates to intended use and is given no weight. As to claim 20, the recitation "injection molded" relates to a method of making and does not distinguish over the cited apparatus.
